

IN-SITU ZIRCONIA OXYGEN ANALYZER

<HART communication>

DATA SHEET

ZFK8, ZKMA/ZKMB, ZTA

This oxygen analyzer can continuously measure oxygen concentration in combustion exhaust gas of industrial boilers or furnaces, and is suited to combustion management and control.

The analyzer system is comprised of the detector and converter coupled together as a complete system. The detector includes the flow guide tube and the sensor. The flow guide tube inserted into the stack draws the process gas into the sensor. The converter has the sensor diagnosis function which ensure the long-term use and the stability of the sensor.

FEATURES

1. No gas sampling devices required

Insertion type sensor delivers quick response.

2. Easy maintenance

Modular design allows easy replacement of sensor, flow guide tube, and filter.

3. Reliability and long-term stability

To check the degree of sensor depletion due to gas components in the target gas, the converter has the sensor diagnostic function so that you know when to replace the sensor.

4. Improved safety

The converter cuts off the power supply for the detector when detecting a burnout of thermocouple for heater control. The converter also cuts off the power supply at emergency, in response to an external contact input. These functions along with the key lock function are equipped as standard to ensure improved safety.

5. Easy operation

A user can operate the converter or make various settings on an interactive basis. Display language is available in English, Chinese, or Japanese.

6. HART communication (option)

The HART communication enables remote control.

*HART® is a registered trademark of the FieldComm Group.

SPECIFICATIONS

General Specifications

Measuring object: Oxygen in noncombustible gas

Measuring method:

Insertion type zirconia sensor

Measuring range: 0 to 2 ... 50 vol% O₂
(in 1 vol% O₂ steps)

Repeatability: Within ±0.5%FS

Linearity: Within ±2%FS

Response time: Within 4 to 7 sec, for 90% (from calibration gas inlet)

Warmup time: ≥ 10 min

Analog output: 4 to 20mA DC (allowable load resistance ≤ 500Ω) or 0 to 1V DC (output resistance ≥ 100Ω), linear, isolated

Power supply: Rated voltage:
100 to 120V AC (operating voltage 90 to 132V AC)
200 to 240V AC (operating voltage 190 to 264V AC)
Rated frequency: 50/60Hz

Power consumption:

Startup: 255VA

During operation: 70VA

[When the power supply voltage
is 100 or 220 V AC]

Detector (ZFK)**Measured gas temperature:**

Flow guide tube system; -10 to +600°C
 (for general-use, corrosive gas)
 Ejector system; -10 to +1500°C (for high-
 temperature gas)
 -10 to +800°C (for general-use)

Measured gas pressure:

-3 to +3kPa

Flow guide tube:

- General-use, for corrosive gas, with blowdown nozzle:
 Flange: JIS 5K 65A FF
 Insertion length: 0.3, 0.5, 0.75, 1 m
- For high particulate:
 *The flow guide tube for high particulate gas comes with blowdown nozzle. You can select the one with or without the flow guide tube cover.
 Flange: JIS 5K 80A FF
 Insertion length: 0.3, 0.5, 0.75, 1 m

Ambient temperature:

Detector: -10 to +60°C
 Detector flange surface: ≤ 125°C during the power is supplied
 Ejector: -5 to +100°C
 *When sample gas temperature is lower than 150°C and the outside temperature is lower than 0°C, cover the flow guide tube flange and the detector (the part that contact outside air) with thermal insulating material to prevent dew condensation.

Storage temperature:

Detector: -20 to +70°C
 Ejector: -10 to +100°C

IP rating:

Equivalent to IP66 excluding the filter
 The heat-retaining cover (12th code) is required for the use in a cold area.

Filter:

Alumina(filtering accuracy 50μm) and quartz paper

Main materials of gas-contacting parts:

Detector; Zirconia, SS316, platinum
 Flow guide tube; SS304 or SS316
 Ejector (general use); SS316, SS304
 Ejector; (for high temperature) SiC, SS316, SS304

Pipe adapter for calibration gas inlet:

for 6 mm tube or 1/4 inch tube (as selected in the 6th code)

Pipe adapter for reference gas inlet (option):

for 6 mm tube or 1/4 inch tube (as selected in the 13th code)

Installation:

Horizontal plane ±45°, ambient air should be clean.

Dimensions:

(L × max. dia.) 194mm × 125.5mm

Weight:

Detector; 1.6kg

Ejector; 15kg (insertion length 1m)

Flow guide tube (general-use, 1m); 5kg

Finish color:

Silver and SS metallic color

Calibration gas flow:

1.5 to 2 L/min

Blowdown air inlet pressure:

200 to 300kPa

Ejector:

Probe for guiding measured gas to detector
 Flange; JIS10K 65A RF
 Insertion length; 0.5, 0.75, 1, 1.5m (according to customer's specification)

Ejector air inlet flow rate:

5 to 10 L/min

Ejector exhaust gas processing:

Returned to flue or furnace

Ejector heater temperature drop alarm output:

SPST-NO contact, 200 V AC, 2A

Mechanical thermostat

The contact is closed when the heater temperature is 100°C or lower.

Converter (ZKM)**Concentration value indication:**

Digital indication in 4 digits

Contact output:

6 points, SPST-NO,
 250 V AC, 3A or 30 V DC, 3A

- Functions;
- Under maintenance
 - Error^{*1}
 - Alarm^{*2}
 - Zero calibration gas
 - Span calibration gas
 - Blowdown^{*3}

Notes

1. The contact is closed upon: open circuit of thermocouple line, open circuit of O₂ sensor line, temperature overrange, calibration error, zero/span error, output error.
2. The contact is closed upon the alarm you selected among: H, L, HL, HH, LL.
3. The contact is closed during blowdown. This function is available only on the version with blowdown nozzle.

Contact input:

3 points
 ON; 0V (10mA or less), OFF; 5V

- Functions;
- External hold
 - Calculation reset
 - Heater OFF
 - Blow down (option)
 - Inhibition of calibration
 - Calibration start
 - Range change

Calibration method:

- (a) Manual calibration with key operation
- (b) Auto. calibration (option)

Calibration cycle; 00 day 00 hour to 99 days 23 hours

- (c) Batch calibration

Calibration gas:

- Setting range
 Zero gas; 0.010 to 25.00% O₂
 Span gas; 0.010 to 50.00% O₂

- Recommended calibration gas concentration
 Zero gas; 0.25 to 2.0% O₂
 Span gas; 20.6 to 21.0% O₂

(oxygen concentration in the air)

Blowdown: A function for blowing out dust that has accumulated in the flow guide tube. Blowdown can be performed for a predetermined time and at predetermined intervals.
Blowdown cycle: 00 hour 00 minute to 99 hours 59 minutes
Blowdown time: 0 minute 00 second to 0 minutes 999 seconds

Output signal hold:

The converter holds the output signal during: calibration, blowdown, sensor recovery, sensor diagnosis, PID auto-tuning, and during the maintenance mode is set to "yes". You can cancel the output hold function during warm-up.

Selector valve and flowmeter (option):

The selector valve allows you to switch between the zero gas and the span gas when you carry out a calibration. The flowmeter is used for regulating the flow rate of the calibration gas.

Communication (option):

HART or
RS485 (MODBUS)

Combustion efficiency display (option):

This function calculates and displays combustion efficiency from oxygen concentration and measured gas temperature.
Thermocouple (R) or thermocouple (K) is required for temperature measurement.
Range: 0 to 1000°C, Accuracy: ±5°C.
On the version with combustion efficiency display, an alarm function of "rich mode" indication is also available.

Ambient temperature:

-20 to +55°C

Ambient humidity:

95% RH or less, non condensing

Storage temperature:

-30 to +70°C

Storage humidity: 95% RH or less, non condensing

IP rating: Equivalent to IP66 or IP67

Case material: Aluminum case

Dimensions (H × W × D):

170 × 159 × 70mm (IP66)

220 × 230 × 95mm (IP67)

Weight: IP66: Approx. 2kg (excluding cable and detector)

IP67: Approx. 4.5kg (excluding cable and detector)

Cable: Approx. 4kg/m (with rainproof flexible conduit)

Finish color: Case: Silver

Cover: Munsell 6PB 3.5/10.5 (blue)

Installation: panel mounting or pipe mounting

Notes

- On the version with the combustion efficiency display, the rich mode indicator is available. If you order the version with combustion efficiency display (9th code 1, 4, 5, or 7), select "R" or "K" in the 16th digit.
- If you order the version without combustion efficiency display (9th code Y, 2, 3, or 6), select "Y" in the 16th digit.
- If you order the version with auto calibration (9th code 3, 5, 6, or 7), select "Y" in the 11th digit.
- A thermocouple is to be prepared by customer.

| | Cable (of the specified length) | | 1 |

Items to be prepared separately:

(1) Standard gas for calibration

Type ZBM□NSH4-01 (up to 5% O₂ range)

Type ZBM□NSJ4-01 (over 5% O₂ range)

(2) Pressure regulator for standard gas (type ZBD61003)

(3) Flowmeter

Type: ZBD42203, 0.2 to 2L/min (for calibrating gas)

Type: ZBD42403, 1 to 10L/min (for ejector)

IMPORTANT INFORMATION

- Combustible gases such as CO and H₂ in the measured gas cause measurement error.
- Corrosive gases, for example, Si vapor, alkaline metal, P, and Pb, may shorten the life of the sensor.
- If the gas temperature reaches 300°C or above, remote the detector flange from the furnace wall so that the surface temperature of the flange will not go higher than 125°C. Mount the flow guide tube in such a direction that less gas flows into the detector.
- When the dust contained in the process gas is high, install the flow guide tube inclined downward, and in such a direction that less gas flows into the detector.
- If you use the analyzer in a waste incinerator, do not use the automatic blowdown because it causes corrosion of the flow guide tube due to drain water. Carry out blowdown manually after the furnace is stopped and the change in readings is decreased.

Replacement detector element

| Power supply | Code symbols |
|----------------|--------------------|
| 100 to 120V AC | ZFK8YY15-0Y0YY-0YY |
| 200 to 240V AC | ZFK8YY35-0Y0YY-0YY |

DETECTOR SELECTION GUIDE

The device combination varies according to the conditions of the gas to be measured. Select the appropriate devices to be combined with reference to the following table.

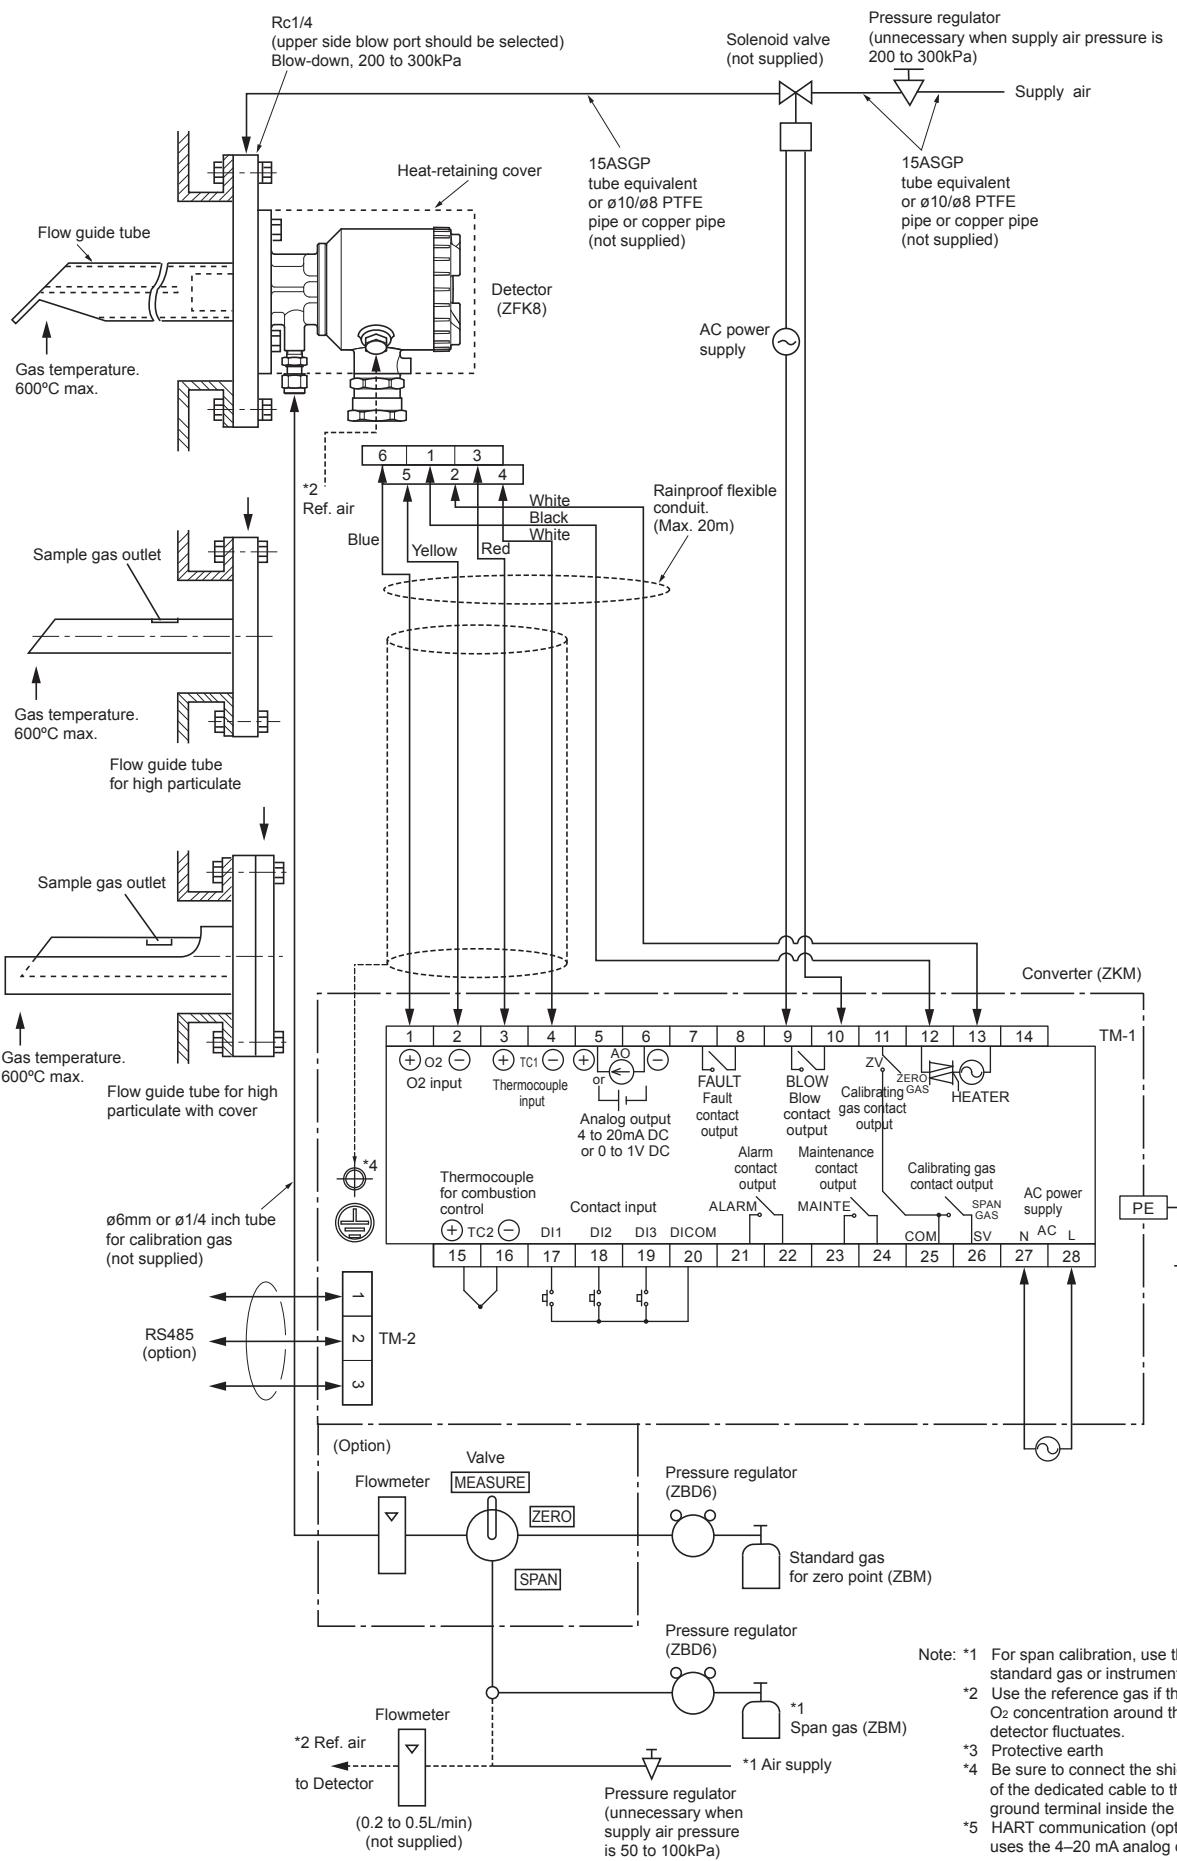

| Application | | Gas conditions | | | | Detector | | | Converter | Ejector |
|---------------------|----------|----------------|-----------|-------------------------|----------|-----------------|----------------------------------|---------------|--------------|---------|
| | | Temp. | Flow rate | Dust | Moisture | Flange material | Flow guide tube | 9th–11th code | | |
| Boilers | Gas, oil | ≤ 600 °C | 5–20 m/s | < 0.2 g/Nm ³ | Low | SS 304 | Standard | 5A□ | ZKMA or ZKMB | — |
| | Coal | | | < 10 g/Nm ³ | Low | | With blowdown nozzle | 5C□ | | |
| Refuse incinerators | | ≤ 600 °C | 5–20 m/s | < 1 g/Nm ³ | Low | | For corrosive gas | 5B□ | | |
| | | | | < 10 g/Nm ³ | Low | | With blowdown nozzle | 5C□ | | |
| | | | | < 25 g/Nm ³ | Low | | For high particulate | 6D□ | | |
| | | | | < 25 g/Nm ³ | High | | For high particulate, with cover | 6E□ | | |
| | | | | < 1 g/Nm ³ | Low | | No flow guide tube | 0Y0 | | |
| Heating furnaces | | ≤ 800 °C | ≤ 1 m/s | < 1 g/Nm ³ | Low | — | No flow guide tube | 0Y0 | ZTA2 | — |
| | | ≤ 1500 °C | ≤ 1 m/s | < 1 g/Nm ³ | Low | | No flow guide tube | 0Y0 | | |

Notes

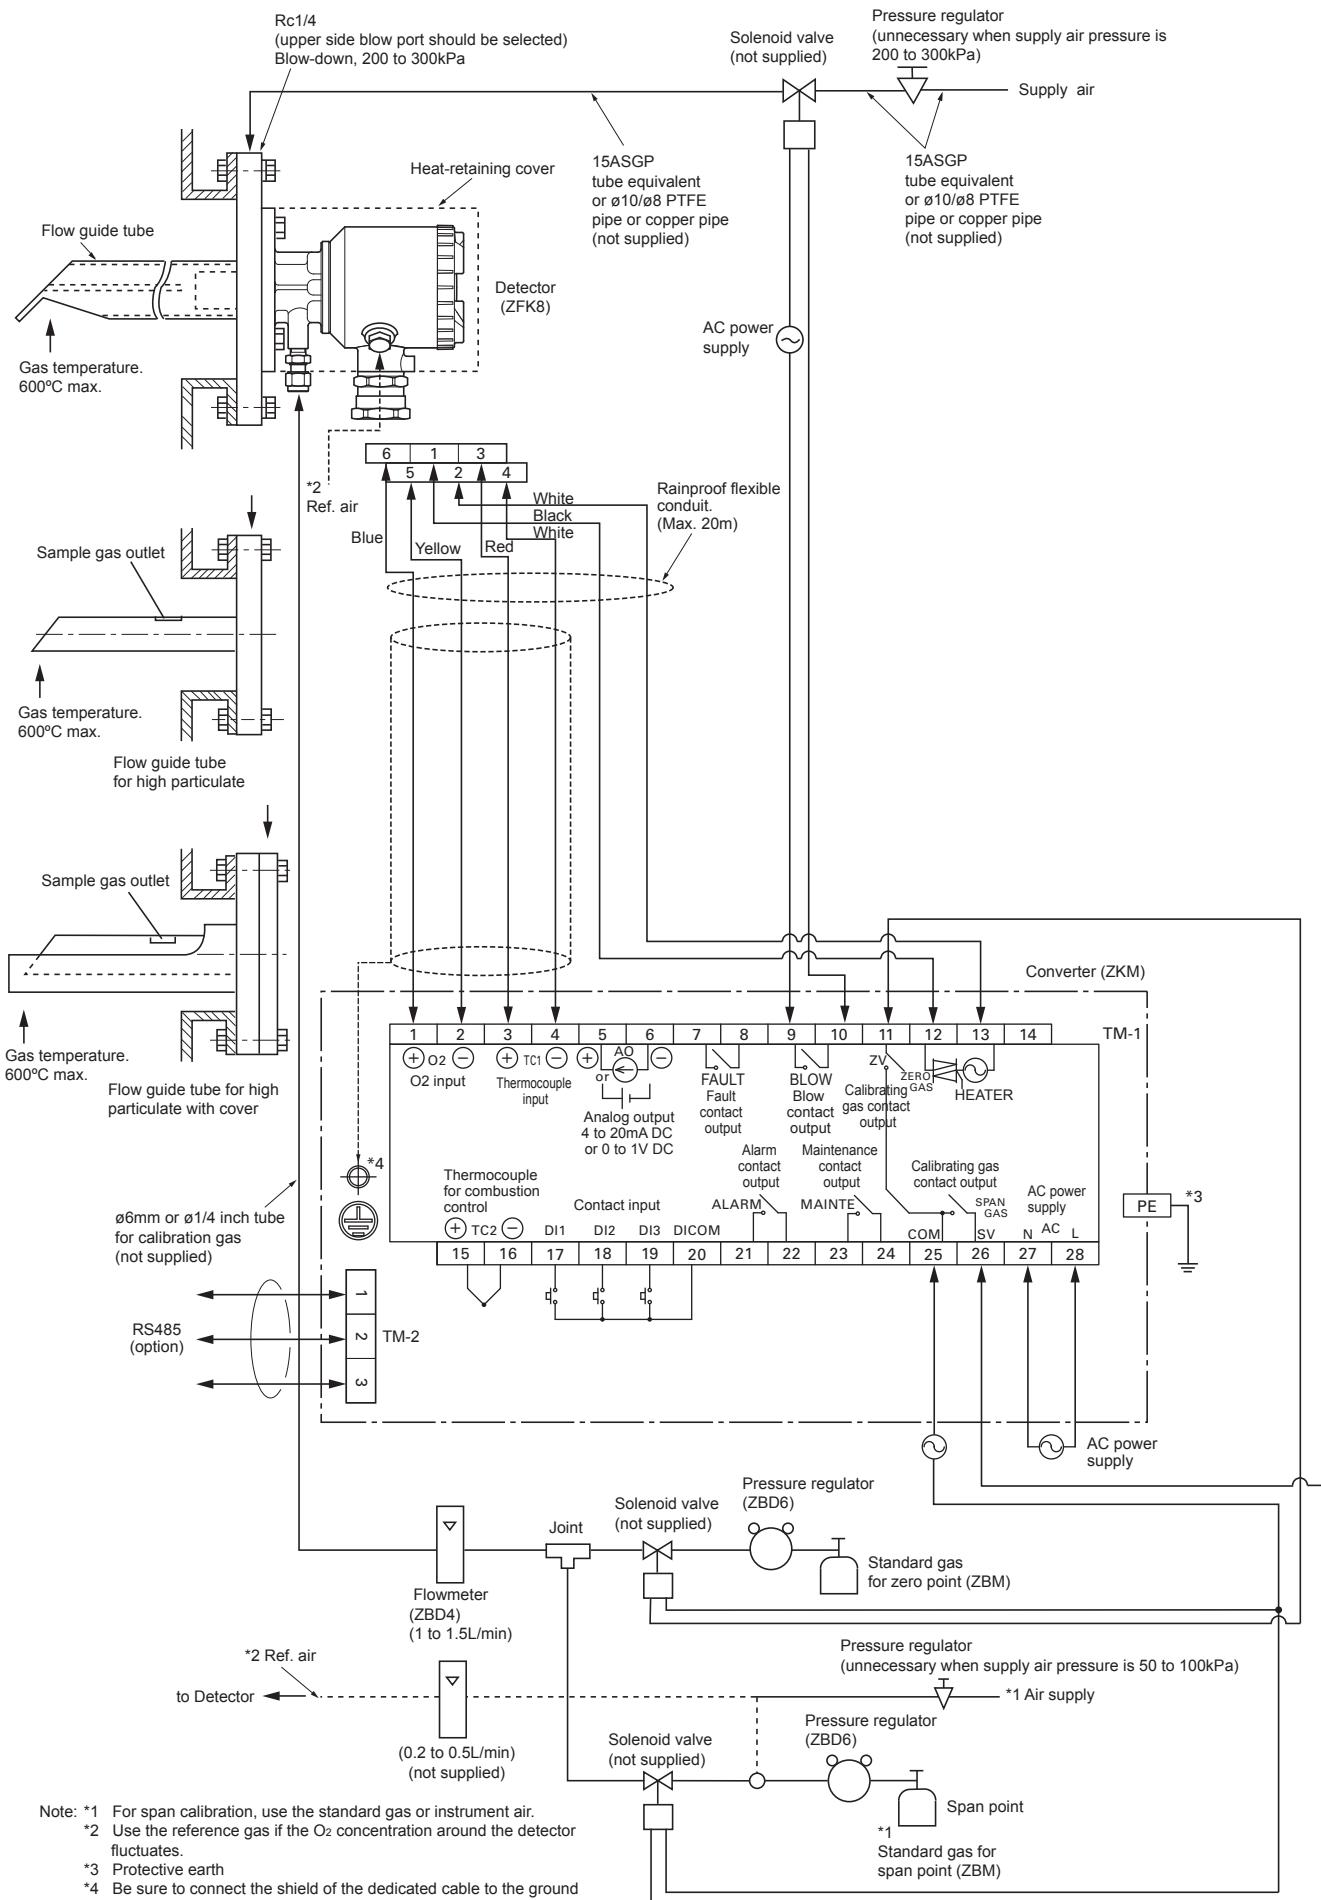

- Dust volumes listed above are approximate value.
- If the oxygen concentration of ambient air fluctuates, select a detector with a pipe adapter for reference gas inlet (13th code A or B).
- Consult us for specifications not listed above.

CONFIGURATION

Flow guide tube system (with valve)

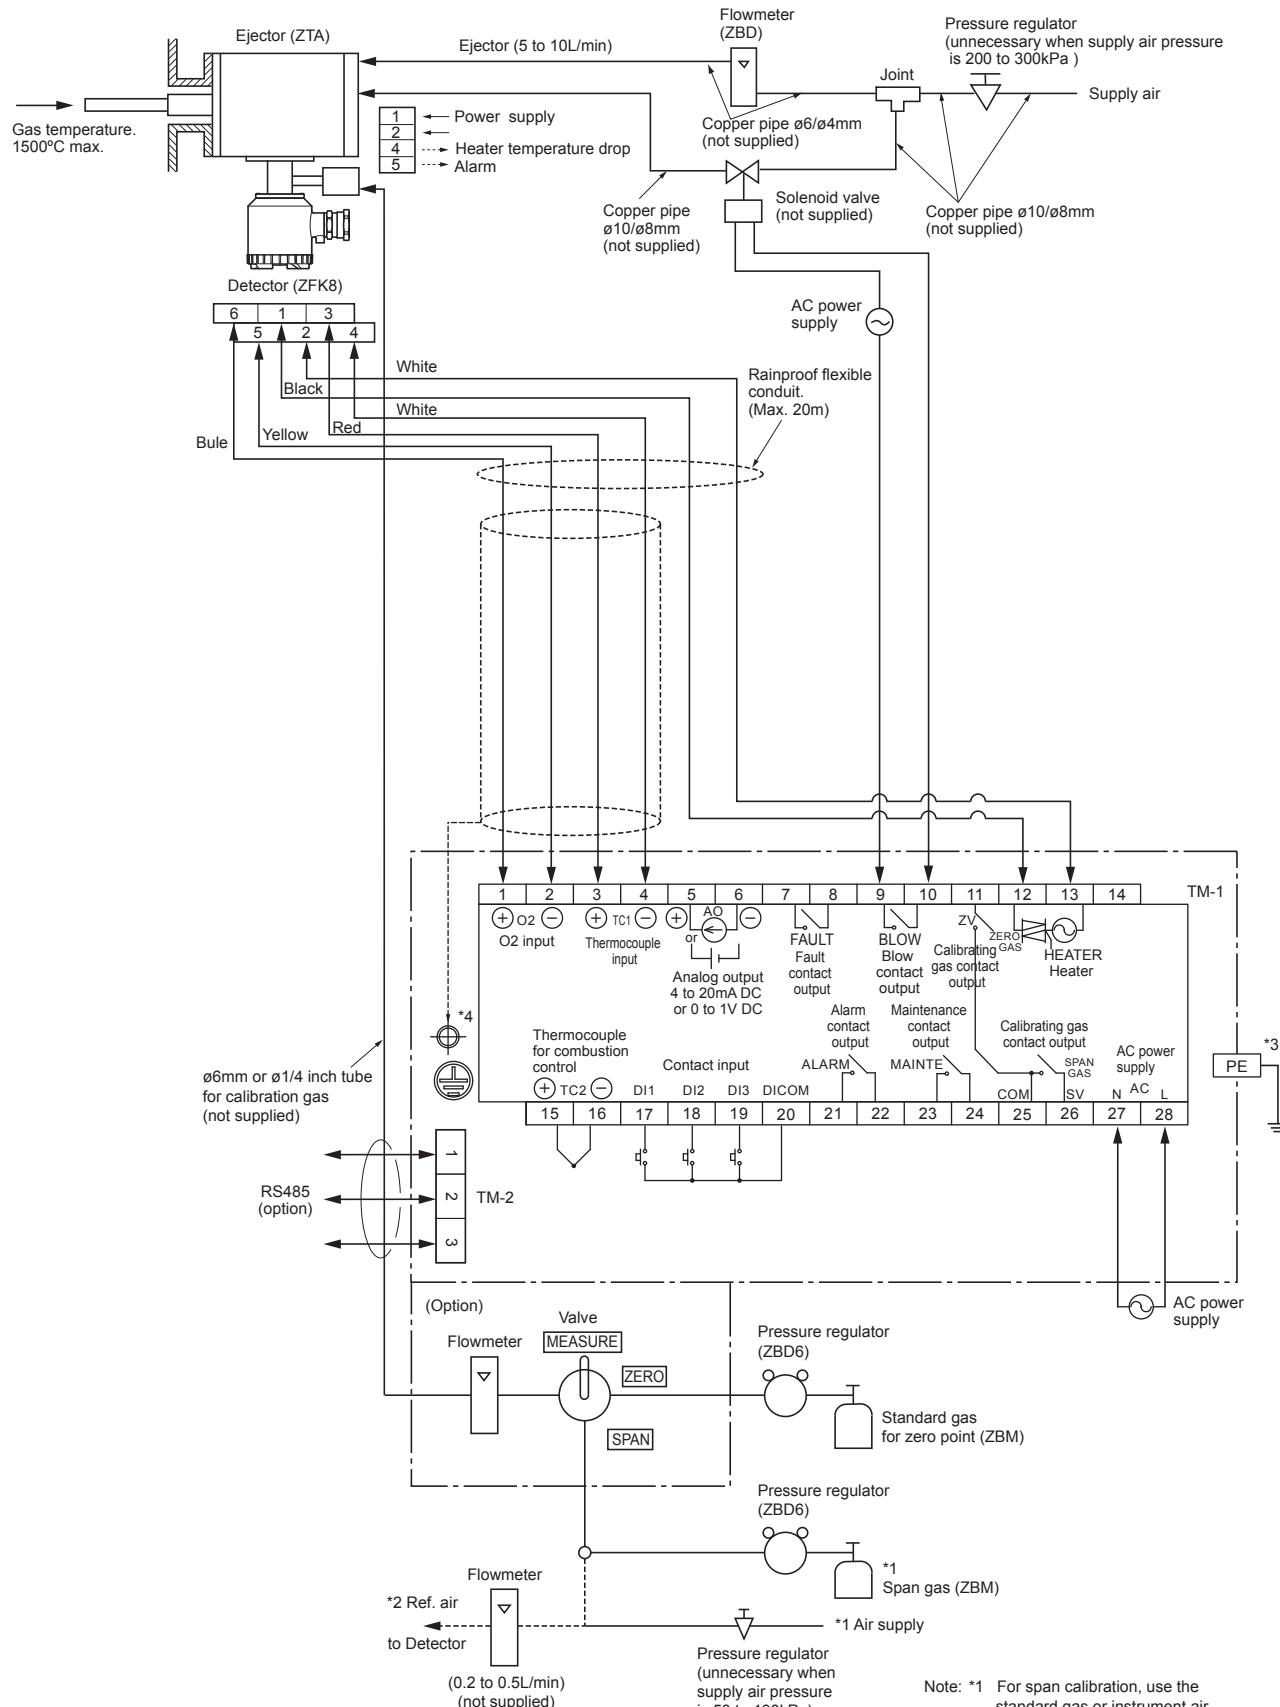

Flow guide tube system

Note: *1 For span calibration, use the standard gas or instrument air.
 *2 Use the reference gas if the O₂ concentration around the detector fluctuates.
 *3 Protective earth
 *4 Be sure to connect the shield of the dedicated cable to the ground terminal inside the converter.
 *5 HART communication (option) uses the 4–20 mA analog output line.

Ejector system (with valve)

Note: *1 For span calibration, use the standard gas or instrument air.

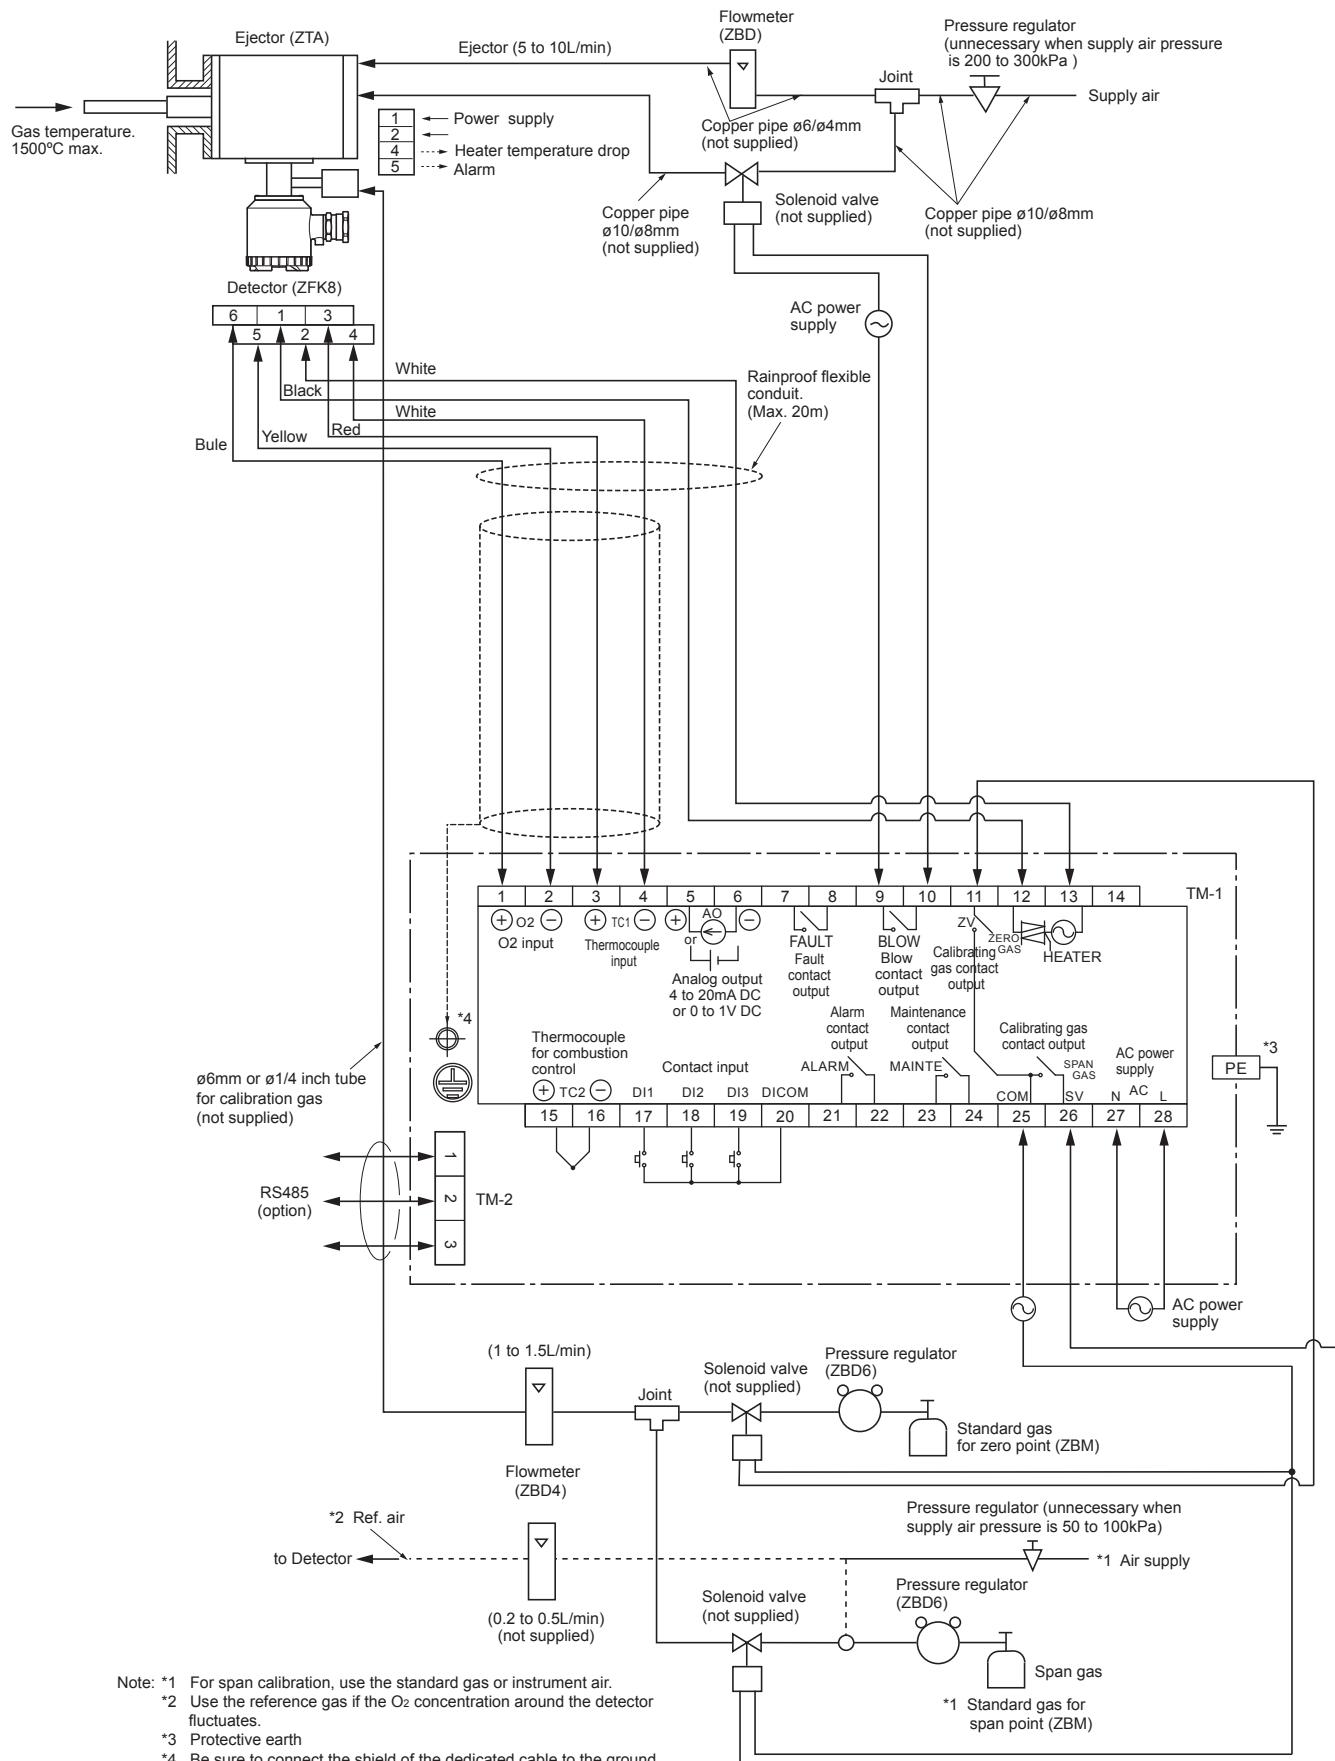

*2 Use the reference gas if the O₂ concentration around the detector fluctuates.

*3 Protective earth

*4 Be sure to connect the shield of the dedicated cable to the ground terminal inside the converter.

*5 HART communication (option) uses the 4–20 mA analog output line.

Ejector system

Note: *1 For span calibration, use the standard gas or instrument air.

*2 Use the reference gas if the O₂ concentration around the detector fluctuates.

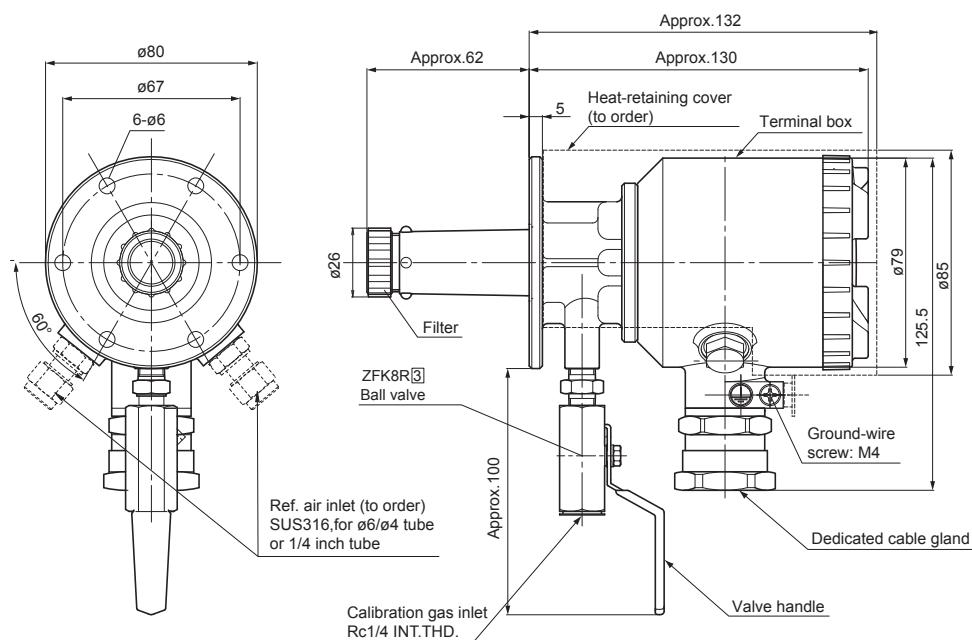

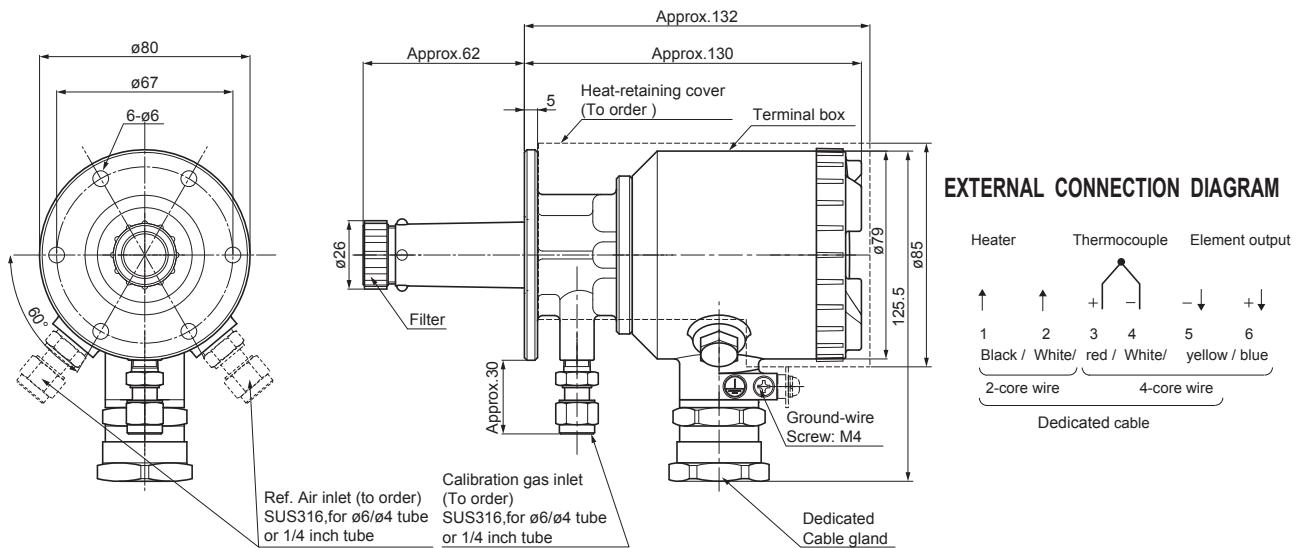

*3 Protective earth

*4 Be sure to connect the shield of the dedicated cable to the ground terminal inside the converter.

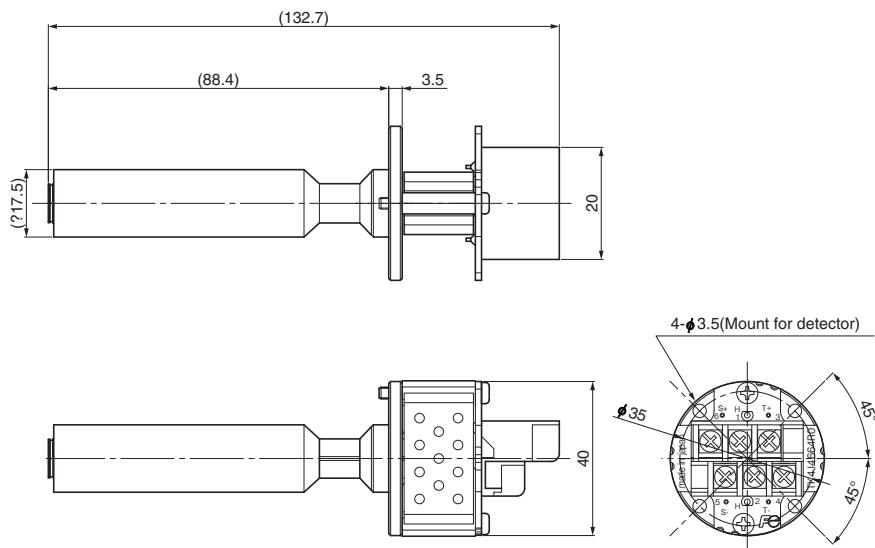

*5 HART communication (option) uses the 4–20 mA analog output line.
